Trust Basics

Whether you're seeking to manage your own assets, control how your assets are distributed after your death, or plan for incapacity, trusts can help you accomplish your estate planning goals. Their power is in their versatility--many types of trusts exist, each designed for a specific purpose. Although trust law is complex and establishing a trust requires the services of an experienced attorney, mastering the basics isn't hard.

What is a trust?

A trust is a legal entity that holds assets for the benefit of another. Basically, it's like a container that holds money or property for somebody else. There are three parties in a trust arrangement:

- The grantor (also called a settlor or trustor): The person(s) who creates and funds the trust
- The beneficiary: The person(s) who receives benefits from the trust, such as income or the right to use a home, and has what is called equitable title to trust property
- The trustee: The person(s) who holds legal title to trust property, administers the trust, and has a duty to act in the best interest of the beneficiary

You create a trust by executing a legal document called a trust agreement. The trust agreement names the beneficiary and trustee, and contains instructions about what benefits the beneficiary will receive, what the trustee's duties are, and when the trust will end, among other things.

Funding a trust

You can put almost any kind of asset in a trust, including cash, stocks, bonds, insurance policies, real estate, and artwork. The assets you choose to put in a trust will depend largely on your goals. For example, if you want the trust to generate income, you should put income-producing assets, such as bonds, in your trust. Or, if you want your trust to create a fund that can be used to pay estate taxes or provide for your family at your death, you might fund the trust with a life insurance policy.

Potential trust advantages:

- *Minimize estate taxes*
- *Shield assets from potential creditors*
- *Avoid the expense and delay of probate*
- *Preserve assets for your children until they are grown (in case you should die while they are still minors)*
- *Create a pool of investments that can be managed by professional money managers*
- *Set up a fund for your own support in the event of incapacity*
- *Shift part of your income tax burden to beneficiaries in lower tax brackets*
- *Provide benefits for charity*

Potential trust disadvantages:

- *A trust can be expensive to set up and maintain; trustee fees, professional fees, and filing fees must be paid*
- *Depending on the type of trust you choose, you may give up some control over the assets in the trust*
- *Maintaining the trust and complying with recording and notice requirements can take considerable time*
- *Income generated by trust assets and not distributed to trust beneficiaries may be taxed at a higher income tax rate than your individual rate*

Types of trusts

There are many types of trusts, the most basic being revocable and irrevocable. The type of trust you should use will depend on what you're trying to accomplish.

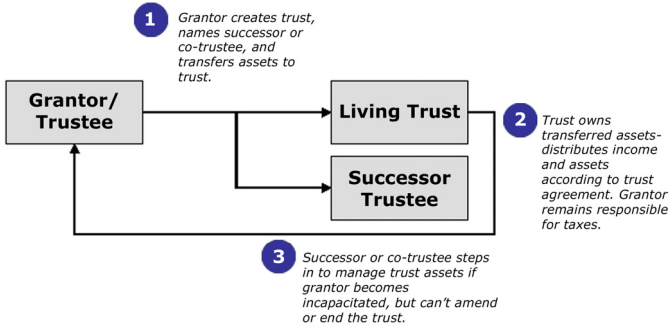

Living (revocable) trust

A living trust is a trust that you create while you're alive.

A living trust:

- Avoids probate: Unlike property that passes to heirs by your will, property that passes by a living trust is not subject to probate, avoiding the delay of property transfers to your heirs and keeping matters private
- Maintains control: You can change the beneficiary, the trustee, any of the trust terms, move property in or out of the trust, or even end the trust and get your property back at any time
- Protects against incapacity: If because of an illness or injury you can no longer handle your financial affairs, a successor trustee can step in and manage the trust property for you while you get better. In the absence of a living trust or other arrangement, your family may have to ask the court to appoint a guardian to manage your property

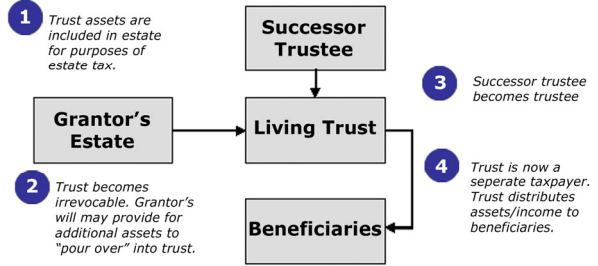

How a revocable living trust works during grantor's life

A living trust can also continue after your death--you can direct the trustee to hold trust property until the beneficiary reaches a certain age or gets married, for instance.

Caution: Despite the benefits, living trusts have some drawbacks. Property in a living trust is generally not protected from creditors, and you cannot avoid estate taxes using a living trust.

How a revocable living trust works upon grantor's death

Irrevocable trusts

Unlike a living trust, you can't change or end an irrevocable trust. You can't remove assets, change beneficiaries, or re-write any of the terms of the trust. Irrevocable trusts are most often used to minimize estate tax. The transfer may be subject to gift tax on the value of the property at the time of transfer, but the property, plus any future appreciation, is removed from your gross estate. That means your ultimate estate tax liability may be less, resulting in more property that can pass to your heirs.

Tip: Each taxpayer has a \$1 million lifetime exemption from the federal gift tax, so you may not actually have to pay the tax. You may owe state gift tax, though, if you live in one of the handful of states that impose gift tax.

Additionally, property transferred through an irrevocable trust will avoid probate, and may be protected from future creditors.

Whether you're seeking to manage your own assets, control how your assets are distributed after your death, or plan for incapacity, trusts can help you accomplish your estate planning goals. For more information, consult an experienced attorney.
